Debugging ECONNREFUSE...

/debug request What's wrong with this request? I'm getting this error: Error: ECONNREFUSED

npx start
or
npx run dev

2. Confirm the port. Make sure your server is actually configured to listen on port 3000. Check your app's config or startup logs — it may be running on a different port (e.g., 8080, 5000, 4000).

3. Check if the port is in use by anything:

Windows
netstat -ano | findstr :3000

macOS/Linux
lsof -i :3000

4. Verify the path. Once the server is running, confirm that the route /api/v1/students exists in your application.

The request itself looks fine — it's a simple GET with no body, no auth, and no variables. Once your server is running on port 3000, this request should work as-is.

If your server is running on a different port, update the URL in the request to match (e.g., http://localhost:8080/api/v1/students).

What would you like to do next?
Change the port in the URL
